### REASONS FOR ALLOWANCE

1. Claims 1-17, 19-27, 29, 30, 36, 37 and 39-47 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance: The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method for forming a wiring, particularly characterized by a step of performing selectively a lyophilic treatment on the opening portion and a peripheral region of the opening portion of the surface of the insulating film to form a lyophilic region and a liquid-repellent region, as detailed in claim 1.
3. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method for forming a wiring, particularly characterized by a step of forming selectively a lyophilic region in the liquid-repellent region so that the surface of the insulating film includes the liquid-repellent region and the lyophilic region in the opening portion and a peripheral region of the opening portion, as detailed in claims 2, 3, and 9. Claims 4-8 depend from claim 3 and claims 10-13 depend from claim 9.
4. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method for manufacturing a thin film transistor, particularly characterized by a step of performing selectively a lyophilic treatment on a region of the surface of the insulating film to form a first lyophilic region so that the surface includes the first liquid-repellent region and the first lyophilic region in the opening portion and a peripheral region of the opening portion, as detailed in claim 14. Claims 21-24, depend from claim 14.

5. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method for manufacturing a thin film transistor, particularly characterized by a step of forming selectively a first lyophilic region in the first liquid-repellent region so that the surface includes the first liquid-repellent region and the first lyophilic region in the opening portion and a peripheral region of the opening portion, as detailed in claim 15.

6. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method of manufacturing a thin film transistor, particularly characterized by the step of forming a second liquid-repellent region by a plasma treatment on a surface for forming a source electrode and drain electrode; forming selectively a second lyophilic region in the second liquid repellent region, as detailed in claim 16. Claims 36, 41 and 43 depend from claim 16.

7. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method for manufacturing a thin film transistor, particularly characterized by the step of forming a second liquid-repellent region by plasma treatment on the semiconductor film having one conductivity and gate insulating film; forming selectively a second lyophilic region in the second liquid repellent region, as detailed in claim 17. Claim 37 depend from claim 17.

8. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method for manufacturing a thin film transistor, particularly characterized by the step of forming a second liquid-repellent region by performing a plasma treatment on the gate insulating film; forming selectively a

second lyophilic in the second repellent region, as detailed in claim 19. Claim 39 depend from claim 19

9. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method for manufacturing a thin film, particularly characterized by the step of forming a second liquid-repellent region by plasma treatment on the semiconductor film; forming selectively a second lyophilic region in the second repellent region, as detailed in claim 20. Claims 40, 42 and 44 depend from claim 20

10. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method of manufacturing a thin film transistor, particularly characterized by the step of forming a second liquid-repellent region in a surface of the opening portion and the interlayer insulating film by a plasma treatment on the interlayer insulating film which the opening portion is formed; forming selectively a second lyophilic region in the opening portion of the second liquid-repellent region, as detailed in claim 25. Claims 27, 29 and 30 depend from claim 25.

11. The prior art of record and to the Examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a method of manufacturing a thin film transistor, particularly characterized by the step of forming a second film containing fluorine over the semiconductor film having one conductivity and the gate insulating film; forming selectively a second lyophilic region in the second film containing fluorine, as detailed in claim 26. Claims 45-47 depend from claim 26.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
